

# Case Study

'NovoForm – taking the WORK out of formwork'

## Trago Mills Retail and Leisure Complex

Regional discount retailer Trago Mills has been located in the South West for over 50 years. Its new £40m retail and leisure facility is currently being built on the site of the old works in Merthyr Tydfil, adjacent to the Cyfarthfa Retail Park.

The new 30,250m<sup>2</sup> store will incorporate many of the retailers signature styles including 17 'Trago Towers' and is expected to create around 400 jobs.

- Close liaison with site and accurate, scheduled deliveries meant the project finished on programme
- Foundation design required bespoke panel sizes
- The scale of the building required large quantities of Novoform panels to be held in stock for call-off
- Speed and ease of installation of Novoform Formwork without the need for skilled labour meant each delivery of panels were installed efficiently and to programme
- Each delivery was palletised and clearly identified for ease of storing on site
- Novoform system requires minimum dig resulting in reduced material being removed from site
